Blades & Cutting

We offer a comprehensive range of the most popular diamond cutting blades manufactured to ensure product performance, durability & consistency.

In addition, we have a selection of high

performance reciprocating blades, jigsaw blades and replacement bandsaw blades.

Circular Saw Blades

- Continuous rim precision cutting blades for hard materials, ceramic tiles, quarry tiles, floor tiles, marble tiles, slate tiles and dense tiles
- Offering a fast smooth cutting action
- Wet cutting only
- The water flow cools the blade and helps remove slurry
- This blade range is particularly suitable when the application requires a smooth accurate edge

BLY1200/50 - For extensive range of materials including most types of concrete. General masonry products, stock paving bricks, some granites, most roofing tiles and hard sandstones.

CONCRETE

BLY0800 - Suitable for abrasive materials including green concrete, breeze blocks, soft facing bricks, abrasive refractory materials, fire bricks, cellular concrete bricks, soft sandstone and other lightweight abrasive materials.

BRICK

BLY1255 - For hard non-abrasive materials, very hard concrete, Class A engineering bricks, 65-100 newton clay paviors, hard paving slabs, hard clay roof tiles, granite, hard slate, vitrified clay products.

Professional double laser welded diamond blades. High performance and long life blades.

BLY1240 - Suitable for professional quality floorsaw. High performance long life blade. For limestone and granite aggregate asphalt. High speed cut.

BLY1280 - Suitable for masonry bench saw. High alumina, hard non abrasive products. Very hard concrete, Class A engineering bricks, 65-100 newton clay pavers, hard flint aggregates, reinforced concrete lintels, kerbs, hard concrete paving slabs, hard clay roof tiles, some granites, hard slate, vitrified clay products.

BLY1245 - Green Concrete. Suitable for professional quality floorsaw. Especially designed for soft aggregate and abrasive asphalt. Also used for other critically abrasive applications such as medium to soft sandstone, asphalt over concrete, abrasive blocks, breeze blocks, very abrasive green concrete.

BLY1180 - Set Concrete. Suitable for professional quality floor saw. Blades suitable for use on concrete with normal levels of reinforcing, mass river gravel concrete, medium hard aggregates and reinforced concrete with soft aggregate.

CONCRETE

Concrete cutting

It is critical to assess the age of the concrete when trying to ascertain the correct blade type.

Stage 1 - Approximately 10 hours after the concrete pour, the concrete is considered green. This is the best time to cut a concrete slab to prevent cracking from expansion after it has cured. At this stage the concrete has not cured or set and the sands and granules have not properly set into the binder or cement. When sawing in this type of application the slurry or debris rolls around in the cut above the segment area. This starts to wear the core.

Stage 2 - When the concrete is approximately 24 hours old it is more set or cured. The sand is more tightly held in the mortar making the concrete less abrasive during cutting. A slightly softer bond is required but some abrasion can take place.

Stage 3 - After 24 - 72 hours the concrete is semi-cured. The sand is quite tightly held in the mortar thus reducing the abrasive properties of the concrete. A softer bond than on either stage 1 or 2 is required.
